

Tenths and Hundredths

You can use a model and a place-value chart to read and write decimals. A model and a place-value chart can also help you write a fraction for a decimal.

Using Models

Think: $\frac{5}{10} = \frac{1}{2}$

Think: $\frac{60}{100} = \frac{6}{10} = \frac{3}{5}$

Using Paper and Pencil

Ones	.	Tenths	Hundredths
0		5	

Think: $0.5 = \frac{5}{10} = \frac{1}{2}$

Ones	.	Tenths	Hundredths
0		6	0

Think: $0.60 = \frac{60}{100} = \frac{6}{10} = \frac{3}{5}$

Write a fraction and a decimal for each shaded part. Then write the fraction in simplest form.
