

Explore Area of Circles

You can use a formula to find the area of a circle.

When you are given the radius of the circle, use the formula $A = \pi r^2$, where A = area and r = radius. The value of π is approximately 3.14.

$$A = \pi r^2$$

$$A = 3.14 \times 9^2$$

$$A = 3.14 \times 81$$

$$A = 254.34 \text{ in.}^2, \text{ or about } 254.3 \text{ in.}^2$$

When you are given the diameter of the circle, first divide it by 2 because the radius is half the diameter. Then use the formula.

The diameter is 10 cm, so the radius, r , is 5 cm.

$$A = \pi r^2$$

$$A = 3.14 \times 5^2$$

$$A = 3.14 \times 25$$

$$A = 78.5 \text{ cm}^2$$

Find the area of each circle. Round to the nearest tenth, if necessary.

1.

$$r = \underline{\hspace{2cm}} \text{ in.}$$

$$A = \pi r^2$$

$$A = \underline{\hspace{2cm}} \times \underline{\hspace{2cm}}$$

$$A = \underline{\hspace{2cm}} \times \underline{\hspace{2cm}}$$

$$A = \underline{\hspace{2cm}} \text{ in.}^2$$

2.

$$r = \underline{\hspace{2cm}} \text{ cm}$$

$$A = \pi r^2$$

$$A = \underline{\hspace{2cm}} \times \underline{\hspace{2cm}}$$

$$A = \underline{\hspace{2cm}} \times \underline{\hspace{2cm}}$$

$$A = \underline{\hspace{2cm}} \text{ cm}^2$$

3.

$$r = \underline{\hspace{2cm}} \text{ ft}$$

$$A = \pi r^2$$

$$A = \underline{\hspace{2cm}} \times \underline{\hspace{2cm}}$$

$$A = \underline{\hspace{2cm}} \times \underline{\hspace{2cm}}$$

$$A = \underline{\hspace{2cm}} \text{ ft}^2$$
